Technical Rider: *Alles Banane!*

If your venue does not meet the follow requirements please get in touch to discuss alternative options.

Rigging Point: The rigging of the rope requires a truss, ceiling rod, beam or similar to which the rope can be attached.

Working load limit: minimum 400 kg

Height: minimum 5 m, better 6 m or more

The airspace around the rope must be free over the entire height in a radius of 2 m.

Safe access the the rigging point (e.g. ladder, lift) must be available for attaching / unhookig the rope.

If there is no way to rig the rope, we can bring a free-standing rig. Special swivel feet can be used to level out any unevenness in the subsurface. Height: variable between 5 m and 7 m.

Floor: Minimum size: width 4,5 m / depth 4,5 m

With the free-standing rig: width 6,0 m / depth 5,5 m

Sound: Music system for playing music (USB, CD, MP3) and with microphone connection (XLR male or 6.3 mm jack)

Sound engineer during the show
